

IGEL

Clearer references – less confusion

Your business

You use illustrations in your documentation to present facts in a way that is easily understandable, and you want to establish relationships between the images and the text, quickly and easily. For this reason, you are looking for a standard product with an integrated callout editor that meets all of your requirements.

Our solution

Using IGEL, the new graphics tool in COSIMA, you can directly enter position numbers into the Component Content Management System and then align, move, delete and copy them. Existing images without callout information can also be transformed into IGEL images during the editing process to be 'igled'. In order to set position numbers precisely, just zoom in and out of opened images. Image legends are automatically generated using the callout information.

Enter and align position numbers in the IGEL editor. There are different formats and colors available for your callouts.

Zoom in on individual areas in the graphic using the IGEL magnifying function.

Callouts are automatically incorporated into the publication's image legends and text.
